ANISHA PATURI

Student

Passionate Computer Science Engineering student at KMIT (CGPA 8.6) with hands-on experience in full-stack and AI-driven development. Skilled in the MERN stack, Java, and Python, with internship experience at IBaseIT and ODT. Dedicated to building scalable, intelligent solutions that create real-world impact.

WORK EXPERIENCE

IBaseIT — **MAY 2024 - JUNE 2024**

- GradeSync is a student grade management system that uses Python, PHP, and SQL to add, display, and calculate student grades efficiently. It streamlines managing student data and class averages through a web-based interface.
- Tech Stack: Python, HTML, CSS, MySQL
- https://github.com/AnishaPaturi/GradeSync.git

ODT — **APRIL 2025 - JUNE 2025**

- PythonLonden is a project that transforms the PHP Symfony 1-based Londen's Campaign Manager into Python, aiming to enhance maintainability and performance. The original system offers dashboards for mailed campaigns, response tracking, and data visualization.
- Tech Stack: Python
- https://github.com/AnishaPaturi/PythonLonden.git

PROJECTS

Ctrl+S of Shame — **MARCH 2026**

A comprehensive AI driven mental wellness application designed to help users track their moods, manage wellness, and connect with psychiatrists. Built with modern web technologies for a seamless user experience.
Tech Stack: TypeScript, VS Code Extension API, Node.js
(Available on VS Code Marketplace)

Network Security Toolkit — **MARCH 2026**

Built a Java-based network security toolkit capable of performing multithreaded port scanning, banner grabbing, LAN host discovery, and live packet capture using the Pcap4J library. Implemented socket-based scanning to detect open services (HTTP, HTTPS, SSH) and developed a packet analyzer that extracts source IP, destination IP, protocol type, and packet size from real-time traffic.
Tech Stack: Java, Socket Programming, Multithreading, Pcap4J, Npcap
https://github.com/AnishaPaturi/network-port-scanner.git

EDUCATION

2023 - 2027
Keshav Memorial Institute of Technology

- B.Tech , CSE

SKILLS

- Front End: HTML, CSS, JS, React
- Middle Tier: C, Java, Python, C++
- Back End: MySQL, MongoDB, Express.js, Node.js
- Frame Works: BootStrap, SpringBoot(Basics)
- AI/ML: Machine Learning, Deep Learning, Transformers, GenAI, Streamlit, TensorFlow, Keras, PyTorch, Transformers, Vision Transformer (ViT)
- Agentic AI: LangChain, LanGraph
- Cloud & DevOps: AWS, Docker, Kubernetes
- Computer Science Fundamentals: Data Structures & Algorithms (DSA), Algorithm
- Analysis, Problem Solving, Competitive Programming
- Backend Concepts: Pagination, Idempotency, Caching (Redis Basics)
- Tools & Platforms: Git, GitHub, Jupyter Notebook

FactForge
MARCH 2026

Built a full-stack AI-driven platform that analyzes user-input text to detect misinformation, extract claims, and verify them using real-time web sources. Implemented NLP-based claim extraction, stance classification, and agreement scoring, along with AI-generated content detection. Designed an interactive dashboard with data visualizations and multilingual support for enhanced user experience.
Tech Stack: React, Node.js, Python, NLP, Transformers, APIs, Recharts
https://github.com/AnishaPaturi/FactForge.git

VizTalk
MARCH 2026

Created VizTalk, a conversational data analytics platform that transforms voice/text queries into actionable insights and charts. Implemented speech recognition, natural language query interpretation, and automated visualization generation.
Tech stack: Python, Streamlit, Whisper, FFmpeg, OpenRouter APIs, DeepSeek LLMs, JSON-based storage.
https://github.com/AnishaPaturi/VizTalk.git

Mood Angels
AUGUST 2025 - DECEMBER 2025

Developed and published a VS Code extension that detects errors on file save and debug events using the VS Code Diagnostics API. Deployed to the Visual Studio Code Marketplace.
Tech Stack: React, Python, Agentic AI, MongoDB, Express.js, Node.js
https://github.com/AnishaPaturi/Mood-Angles

Safe Street
APRIL 2025 - JUNE 2025

SafeStreet is an AI-powered platform that detects, reports, and manages road damage via mobile and web interfaces. It enables users to capture images of potholes/cracks, auto-classifies severity, sends reports, and gives authorities a dashboard to track & act.
Tech Stack: React, Transformers, MongoDB, Node.js, Express.js
https://github.com/AnishaPaturi/SafeStreetApplication

Talent Match
NOVEMBER 2024 - DECEMBER 2024

Talent-Match is a platform where users post problems or skill-based queries, and the system matches them with knowledgeable individuals. If someone accepts, they collaborate on a shared interface to solve the issue together.
Tech Stack: HTML, CSS, Java Script, MongoDB, Express.js, Node.js
https://gitub.com/AnishaPaturi/Talent-Match

CERTIFICATIONS

- **Claude Code Course – Anthropic** : Certified; applied LLMs for coding, debugging, and prompt engineering.
- **AWS Certified Cloud Practitioner :** Completed 22.5-hour training on AWS fundamentals, including cloud architecture, core services (EC2, S3, RDS), security best practices, and pricing models.

COLLEGE ENGAGEMENT

- 1st Position in a hackathon in GeeksForGeeks, 2026
- Participated in VJIT Hackathon,
- 2023
- Attended a workshop IITH for Gen AI course
- Worked as Volunteer for DBMS Workshop in KMIT, 2024
- Worked as Volunteer in NMDC Hyderabad Marathon, 2024
- Participated in a Product Space Hackathon, 2025
- 3rd place in an AGentic AI Hackathon

OTHER DETAILS

- Domicile: Hyderabad, India
- Languages: English, Telugu, Hindi
